

AI FUNDAMENTALS IN THE WORK ENVIRONMENT

Capstone Evaluation Project

Workplace AI Implementation

Using AI to Draft a Weekly Work Update Email

Participant Name	Abdulaziz Al Qahtani
Course	AI Fundamentals in the Work Environment
Training Provider	SDAIA Academy
Submission Date	14 September 2026

Submission Overview

This report documents the complete practical workflow required for the final Capstone assessment. The selected workplace task is a recurring weekly email to a direct manager. The task is completed using sanitized input, a structured R.A.C.E. prompt, one documented refinement cycle, and a final human verification of the AI output.

Project at a Glance

Item	Project Evidence
Target task	Drafting a weekly work update email to a direct manager.
AI use	Generate the first draft and refine tone/format; final judgement remains human.
Privacy approach	Only sanitized notes are used; no names, IDs, accounts, customers, company information, or confidential data are included in the prompt.
Refinement	The first draft is reviewed, specific weaknesses are identified, and a targeted follow-up prompt is used.
Verification	The final email is checked against the sanitized notes before being treated as ready to send.
Impact	Manual drafting: 10-15 minutes. AI-assisted drafting, refinement, and review: 3-5 minutes.

Required Capstone Deliverables

- 1. Target task - a real, recurring, text-based task.
- 2. Structured prompt - all four R.A.C.E. elements: Role, Action, Context, and Expectation.
- 3. Iterative refinement - at least one follow-up prompt that identifies what should be improved.
- 4. Data masking - anonymized input with sensitive and identifying details removed.
- 5. Verification and impact - manual checking of the output and an honest estimate of time saved.

AI creates and refines the draft; the participant remains responsible for privacy, factual accuracy, judgement, and the final version.

1. Target Task and Data Masking

1.1 Selected Workplace Task

The selected task is drafting a weekly work update email to a direct manager. The purpose of the email is to document completed work, identify any pending work, and state the next step. It is suitable for the Capstone because it is recurring, text-based, easy to verify against source notes, and low risk when reviewed before use.

1.2 Sanitized Weekly Work Notes

- Completed routine system checks for internal workstations.
- Resolved several employee login and access requests.
- Updated documentation for an internal IT procedure.
- One access request is still pending and requires follow-up next week.

1.3 Privacy Controls

Sensitive Data Category	Handling in This Project
Personal names	Not included
Employee IDs / account numbers	Not included
Company / organisation details in the workplace notes	Not included
Customer information	Not included
Passwords, credentials, contracts, or pricing	Not included
Confidential organisational information	Not included

The input preserves only the minimum information necessary to complete the writing task. Identifying and confidential details are intentionally excluded before the AI prompt is submitted.

2. Structured R.A.C.E. Prompt

The initial request was structured using the four elements required by the course: Role, Action, Context, and Expectation.

R - Role	A - Action	C - Context	E - Expectation
Professional workplace communication assistant experienced in clear internal business emails.	Draft a weekly work update email to the direct manager.	A recurring weekly email documenting completed work, pending work, and next steps using sanitized information.	Provide a subject, greeting, completed work, pending work/next step, and closing; keep it under 150 words and do not invent facts.

2.1 Initial Prompt

For the first practical step of the Capstone, I want to use the following sanitized weekly work notes.

Sanitized work notes:

- Completed routine system checks for internal workstations.
- Resolved several employee login and access requests.
- Updated documentation for an internal IT procedure.
- One access request is still pending and requires follow-up next week.

Using the R.A.C.E. framework:

Role:

You are a professional workplace communication assistant experienced in writing clear internal business emails.

Action:

Draft a weekly work update email to my direct manager.

Context:

This is a recurring weekly email used to document the work completed during the week, any pending work, and the next steps. The information above is sanitized and contains no real names, employee IDs, account numbers, company names, customer information, or confidential organizational data.

Expectation:

Write a professional email with:

- A clear subject line
- A brief greeting
- Completed work
- Pending work / next step
- A professional closing

Keep the email clear and professional and under 150 words.

Use only the information provided above. Do not invent or assume any additional facts.

3. Initial AI Output and Review

3.1 Initial AI Output - Version 1

Subject: Weekly Work Update

Hello,

Please find below my weekly work update:

Completed Work:

- Completed routine system checks for internal workstations.
- Resolved several employee login and access requests.
- Updated documentation for an internal IT procedure.

Pending Work / Next Step:

- One access request is still pending and requires follow-up next week.

Best regards,

3.2 Review of the First Draft

- The response included all four work items and did not invent additional facts.
- The tone was professional, but it felt too formal and generic for a routine weekly email.
- The section headings and bullet-point structure made the message read more like a short report than a natural email.
- A targeted follow-up prompt was therefore used to improve tone and format while preserving the facts.

4. Iterative Refinement

The course requires at least one follow-up prompt that identifies what was unsatisfactory in the first response and asks for a specific improvement. The following prompt was used.

4.1 Follow-up Prompt

The first draft is clear, but I do not like the style because it feels too formal and generic, and the bullet-point structure makes it read more like a report than a natural weekly email.

Please rewrite it in a warmer and more natural professional tone.

Use a short email format instead of section headings and bullet points, keep it under 100 words, preserve all the original facts, and do not add or assume any new information.

4.2 Improved AI Output - Final Version

Subject: Weekly Work Update

Hello,

I wanted to share a quick update on this week's work. I completed routine system checks for internal workstations, resolved several employee login and access requests, and updated documentation for an internal IT procedure.

One access request is still pending and will require follow-up next week.

Best regards,

4.3 Result of the Refinement

The revised version is shorter, more natural, and closer to a normal internal email. It removes unnecessary section headings and bullets while preserving every fact from the sanitized notes. No new information is introduced.

5. Verification and Impact

The final email was manually compared with the sanitized source notes. The verification focused on completeness, factual accuracy, privacy, and unsupported additions.

5.1 Verification Record

Verification Item	Result	Evidence
Completed tasks	Verified	All three completed tasks from the sanitized notes appear in the final email.
Pending work	Verified	The one pending access request and next-week follow-up are included.
Invented facts	None found	No extra facts, dates, names, promises, or assumptions were added.
Sensitive information	None included	No personal names, employee IDs, account numbers, customer information, or confidential workplace information appears in the prompt/output.
Arithmetic	Not applicable	This writing task contains no calculations or numerical totals.
Final human review	Completed	The final wording was reviewed before being considered ready to send.

5.2 Time-Saving Impact

Measure	Observed / Estimated Time
Manual drafting without AI	Approximately 10-15 minutes
AI-assisted drafting, refinement, and review	Approximately 3-5 minutes
Estimated time saved	Approximately 5-12 minutes per weekly email; midpoint estimate is about 8.5 minutes
Impact statement AI reduced the time needed to prepare and refine the email draft, while the participant still performed the final fact check, privacy check, and approval.	

6. Evaluation Alignment and Conclusion

6.1 Evaluation Criteria Alignment

Evaluation Criterion	Evidence in This Submission	Status
Task suitability	A real, recurring, text-based, checkable weekly email task is documented.	Met
Prompt quality	Role, Action, Context, and Expectation are explicitly included in the initial prompt.	Met
Refinement technique	The follow-up identifies specific weaknesses in tone and structure and requests targeted changes.	Met
Privacy compliance	Only sanitized notes are used; identifying and confidential workplace details are excluded.	Met
Verification & impact	The final response is manually checked, and actual time ranges are documented.	Met

6.2 Conclusion

This Capstone demonstrates a complete and responsible AI-assisted workplace workflow. A suitable recurring task was selected, sensitive information was removed before prompting, the first request was structured using R.A.C.E., the first output was reviewed and refined with a specific follow-up instruction, and the final email was manually verified. The result shows that AI can save drafting time without replacing human responsibility for privacy, accuracy, judgement, and final approval.

Appendix A. Interaction Evidence

A.1 Initial Prompt and Version 1 Output

For the first practical step of the Capstone, I want to use the following sanitized weekly work notes.

Sanitized work notes:

- Completed routine system checks for internal workstations.
- Resolved several employee login and access requests.
- Updated documentation for an internal IT procedure.
- One access request is still pending and requires follow-up next week.

Using the R.A.C.E. framework:

ممتاز. سنعتبر هذه النسخة الأولى (Initial Draft / Version 1) ونحتفظ بها كما هي؛ لاحقًا عندما نطلب التعديل سنستخدمها لإثبات Iterative Refinement المطلوب في Capstone. وهذا يتوافق مع منهج الملف بأن الاستجابة الأولى تُعامل كمسودة ثم يتم تحسينها بتعليمات متابعة محددة. AI_Fundamentals_in_Workplace-EN

Initial AI Output — Version 1

Subject: Weekly Work Update

,Hello

:Please find below my weekly work update

:Completed Work

- .Completed routine system checks for internal workstations
- .Resolved several employee login and access requests
- .Updated documentation for an internal IT procedure

:Pending Work / Next Step

- .One access request is still pending and requires follow-up next week

,Best regards

هذه النسخة تستخدم فقط المعلومات التي زودتني بها، ولم تتم إضافة أي أسماء أو أرقام أو معلومات شركة أو تفاصيل سرية أو حقائق غير موجودة في المدخلات. وهي أيضًا أقل من 150 كلمة.

احتفظ بهذه النسخة كما هي؛ لأنها ستكون ال Initial Output الذي سنقارنه بالنسخة المحسنة في الخطوة القادمة.
